Rider Test Case Audit

LIKHAE E-Commerce Platform • Rider Operations • Source-code inspection

23	4	19	FAIL
TOTAL TEST CASES	PASS	FAIL	OVERALL RESULT

Assessment basis

Results below reproduce the Rider source-code audit from the conversation. Only the Rider test cases you pasted are used as expected behavior; the three PDFs were excluded. PASS means inspected code supports the scenario; FAIL means one or more requirements are missing, incomplete, or inconsistent. These are not live browser results. No database was changed.

Results by module

MODULE	TOTAL	PASS	FAIL
Profile, Vehicle & Documents	7	1	6
Availability	4	0	4
Pickup	5	1	4
Delivery & Status Updates	2	1	1
Failed Delivery	5	1	4
TOTAL	**23**	**4**	**19**

Source-table integrity: RID-AVAIL-004 and RID-DLV-005 were merged or incomplete in the paste. Their identifiable expectations are assessed without inventing missing details; unspecified RID-DLV IDs were not added.

Complete test case results

TEST ID	TEST CASE	RESULT	CODE INSPECTION FINDINGS
PROFILE, VEHICLE & DOCUMENTS			
RID-PROF-001	**View profile, vehicle and verification status**	FAIL	Rider profile shows name, vehicle, plate, center and status, but does not show driver license number, expiry date, or links to the two approved documents. Exact seeded identity cannot be verified by static inspection.
RID-PROF-002	**Update vehicle details**	FAIL	The Rider account update accepts personal fields and profile photo only. No Rider vehicle/plate change or new OR/CR submission and re-verification workflow; Logistics has its own plate edit.
RID-PROF-003	**Plate number already used**	FAIL	No Rider-side plate editing route exists, so the duplicate-input attempts cannot run. Logistics plate editor has a unique validation rule, but that does not satisfy Rider 1 changing their own plate.
RID-PROF-004	**License expiry boundary**	FAIL	No driver-license expiry attribute or Rider-side expiry date validation was found; yesterday/today boundary cannot be tested or enforced.
RID-PROF-005	**Document upload rules**	FAIL	Initial registration accepts image/PDF documents up to 5 MB; the Rider profile has no license document replacement uploader. Required 5.0/5.1 MB and disguised executable checks cannot be validated in the requested Rider edit flow.

RID-PROF-006	**Suspended rider cannot work**	FAIL	Suspended status is rejected by rider middleware and assignment eligibility, but there is no Go Online control/suspension-state message as specified. The complete expected UI behavior is unmet.
RID-PROF-007	**Rider cannot see another rider's profile**	PASS	/rider/profile obtains the logged-in rider profile and exposes no {riderId} lookup parameter. Changing an ID cannot reveal Rider 2 profile through this endpoint.
AVAILABILITY			
RID-AVAIL-001	**Go Online**	FAIL	No persisted Online/Offline availability toggle or route. Logistics auto-assign selects eligible ACTIVE/WARNED riders without checking an Online flag. The header text “Rider Online” is static.
RID-AVAIL-002	**Go Offline**	FAIL	No Offline toggle or offline filter in automatic/manual assignment. Active eligible riders can be selected irrespective of Rider availability preference.
RID-AVAIL-003	**Go Offline with an active job**	FAIL	Jobs are stored on the assigned rider, but no Offline action/status exists to stop new offers while maintaining an in-progress parcel.
RID-AVAIL-004	**Offline after logout or session timeout**	FAIL	No persisted availability state and no logout/session hook sets the rider Offline. The pasted test row is interrupted; the surviving expectation is “shows Offline and gets no offer.”
PICKUP			
RID-PICK-001	**Pickup details shown**	FAIL	Pickup detail displays seller business name, pickup address, waybill/tracking and parcel count, but no seller contact phone number.
RID-PICK-002	**Confirm pickup by scanning**	FAIL	Valid scan updates parcel to PICKED_UP and records a timed scan/event, but ₱30 earned per pickup is not implemented and Buyer To Receive tab expectation is not met.
RID-PICK-003	**Confirm pickup by typing tracking number**	PASS	The pickup form supports scan_method=MANUAL and the service verifies the entered tracking number via the same PICKED_UP transition as barcode/QR.
RID-PICK-004	**Wrong tracking number**	FAIL	Wrong/random codes are rejected without advancing pickup, but the message says “This parcel is not part of this seller pickup assignment,” not the specifically expected mismatch wording.
RID-PICK-005	**Double scan at pickup**	FAIL	A second scan does not create a second pickup event, but displays “Parcel already verified” instead of the required “already picked up”; the specified ₱30 one-time earning is not demonstrated.
DELIVERY & STATUS UPDATES			
RID-DLV-005	**COD amount must match**	FAIL	₱499.99/₱500.01 are logged as COD DISCREPANCY, but recordSuccessfulCollection does not reject them, and completeDelivery still marks the parcel DELIVERED. The pasted row was merged, but its COD values and expected rejection are recoverable.
RID-DLV-007	**Cannot update another rider's job**	PASS	The Rider shipment transition immediately rejects an assignment whose rider_profile_id is not the logged-in rider (HTTP 403), leaving Rider 2 assignment unchanged.
FAILED DELIVERY			
RID-FAIL-001	**Mark failed with a reason**	FAIL	Failure reason and attempt event are stored with DELIVERY_FAILED, but no 1-of-3 cap/display or specified ₱0.00 attempt pay guarantee was found; the complete expected behavior is unmet.

RID-FAIL-002	**Reason required**	PASS	Server validation requires failure_reason whenever action=delivery_failed. Missing reason prevents processing and leaves status unchanged.
RID-FAIL-003	**Refused goes straight to Return to Sender**	FAIL	The failure form offers “Buyer refused parcel,” but failure submission defaults to FAILED. No automatic reason-based RETURNED/Return to Sender transition exists.
RID-FAIL-004	**Attempt counter and reschedule**	FAIL	Attempts increment, and a RESCHEDULED state exists, but no mandatory 2-of-3 tracking or complete Logistics rescheduling rule required by this case is enforced.
RID-FAIL-005	**Return to Sender after the 3rd failed attempt**	FAIL	Failure attempt number is count()+1 without a maximum-of-three guard or automatic RETURNED conversion on the third failure. A fourth attempt is not expressly prohibited.

High-priority fixes

Profile, vehicle & documents: Show verified driver-license number, expiration date, and accessible documents; implement rider-initiated plate and OR/CR updates with re-verification and valid expiry/document checks.

Availability: Provide real Online/Offline state, preserve offline status after logout, block suspended riders from online mode, and exclude offline riders from dispatch while keeping their active jobs accessible.

Pickup: Add seller contact information, confirm the specified ₱30 pickup earnings once, and align the buyer To Receive transition and the requested tracking/duplicate-scan messages.

Delivery & COD: Enforce the exact COD collection amount at delivery instead of completing with a discrepancy; preserve rider assignment authorization checks.

Failed delivery: Enforce reason-required failures, attempt counters with a maximum of three, rescheduling, immediate RTS on refusal, and automatic RTS after the third failed attempt with required notifications.

Final assessment

The inspected Rider module supports account-isolated profile access, manual pickup tracking input, protection against updates to other riders’ assignments, and required failure reasons. However, 19 of the 23 requested scenarios remain unmatched or incomplete—particularly availability, vehicle-document re-verification, pickup earnings, COD mismatch rejection and three-attempt Return-to-Sender enforcement. Confirm findings with live integration and user acceptance tests before sign-off.
